## Introduction

»DIE kleine BRANDENBURG-STATISTIK 2010« (statistics for the Land of Brandenburg, 2009, key facts and figures) offers information on the development in the Land of Brandenburg based on the most important statistical results.

This document is divided into chapters on different topics. Chapters 1 – 27 present figures on Brandenburg's demographic, economical, social, cultural and political structures. As far as possible, developments have been highlighted by including the figures for the years 2001, 2005 and 2009. The document also contains information on the administrative districts (Chapter 28), data on Brandenburg's development since 1990 (Chapter 29) and accumulated figures for the region of Berlin / Brandenburg (Chapter 30).

To 31 December 2009 covered the surface of Land Brandenburg 2.95 million hectares. The portion of the agriculture, forest and water surface was with nearly 90 per cent.

With 18,537 births 271 children came less to the world than 2008. After it had given a birth rise in the year 2008 still another, the number of live births decreased back for the first time since 2006 again. In 2009 27,309 Brandenburgers have passed away, 502 more than 2008. Thus a dying surplus of 8,772 persons resulted. By the dying surplus and the migration loss of 2,305 persons the country Brandenburg in the process of the yearly has lost 2009 10,968 persons or scarcely 0.4 per cent of its population. Because of the end of 2009 the total population was with 2,511,525 persons, and had thereby the lowest conditions which the official population statistics for the country Brandenburg determined since the reunification of Germany. Since 2001 the decrease in population which can be observed continued to stop.

At the end of 2009, there were 1.3 million flats in Brandenburg, 2,318 more than at the end of 2008. Most flats were added in the district Potsdam-Mittelmark (799) and in the state capital Potsdam (776). 85.7 per cent of the residential buildings in Brandenburg are in one and two-family houses.

With 10.25 million overnight stays in the accommodating establishments of the country Brandenburg in the year 2009 the previous year result was exceeded again, even if only easily. With 3.71 million arrivals however a lighter decrease was to be registered with the guest numbers. The average duration of stay of the guests increased to 2.8 days.

After being adjusted for price changes, the gross domestic product for Brandenburg went back in the year 2009 by 2.1 per cent. This was a comparatively moderate decrease of the national economy development, which was coined by the world-wide financial and economic crisis in Brandenburg than in other Federal states less. The medium-term view of the price-settled economic development shows the fact that itself the country Brandenburg since the year 2004 constantly even if partly only slightly upward developed and now in the year 2009 a stronger setback to book had.

In the year 2009 there were three large elections in Brandenburg. Beside the members to the European parliament and the Deutscher Bundestag (German Parliament) also the members were selected to the Parliament of Brandenburg.

The SPD with 33.0 per cent of the secondary votes in Brandenburg strongest party followed of the party DIE LINKE with 27.2 per cent and the CDU likewise with 19.8 per cent. FDP and GRÜNE/B90 drew again into the parliament.

»DIE kleine BRANDENBURG-STATISTIK 2010« gives an initial overview of the data provided by official statistics. A brochure along the same lines has been published for the Land of Berlin (»DIE kleine BERLIN-STATISTIK 2010«). Those interested also can find a similarly structured selection of figures and data for the Federal Republic of Germany as well as benchmark figures for all German »Länder« in the »Pocketbook: Germany«, published by the Federal Statistical Office.

### 03 Livelihood

Information on the economic and social situation of the population is provided by the microcensus. This involves an official, annually performed household survey which covers one per cent of all households. These households are selected by means of a random mathematical procedure. Interviewers provide information about the survey which is performed on location.

The building statistics include all aspects of building, from planning to the finished building product. The relevant information is provided not only by the monthly and annual construction industry statistics, but also building activity statistics in particular. The building and housing stock is updated with the building activity statistics in between the building and housing census. The basis for updating is provided by the census of 1995.

## 14 National Accounts

National account (VGR) are a statistical system for presenting a comprehensive, overall picture of the economic activities of all business entities in

Brandenburg. It is based on the European System Accounts (ESA 1995) and the Klassifikation der Wirtschaftszweige WZ2003 (Classification

of Industries). At the centre of national account is the origin of the gross domestic product (GDP) as a measure of performance in Brandenburg.

The foreign trade statistics provide figures with regard to the movement of goods across the frontiers (export and import) between Brandenburg and foreign countries. The basis for the results is provided by the customs documents of importers and exporters in the trading industry with countries outside of the European Union (extra trade) as well as the statistical registrations of acquisitions and deliveries within the community within the meaning of the Value-Added Tax Law (intra trade).

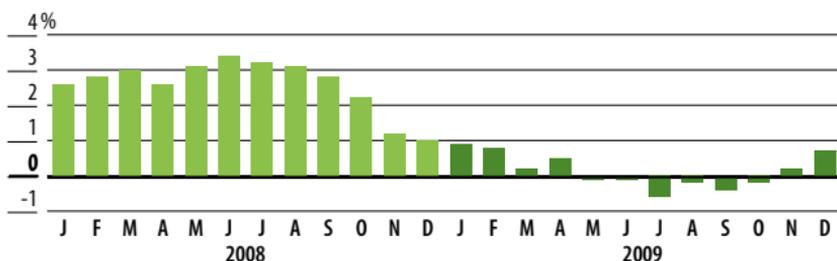

## 21 Consumer Prices

The consumer price index shows the monthly development of consumer prices. Thus it is considered to be a general measure of the change in the purchasing power of money. The basis for calculating the index is a commodity basket with approximately 700 goods and services (price representatives). In accordance with their share in the overall expenditures of private households in the respective price base year (here: 2005), they are incorporated into the index calculation with different values (weights).

The construction price indices show the quarterly development of the prices realised by Brandenburg building companies for certain types of construction work and certain types of structures as well as for various types of maintenance work on buildings, independently of the site of performance. The selected construction work and building types are also included in a uniform federal weighting scheme of specified shares (weights) when it come to calculating the price index. The base year for the building cost indices at present is 2005.
