Chapter 71

Pearls, precious stones; precious metals, rolled precious metals,
articles thereof, fancy imitation jewellery

General notes.

1. Except as otherwise provided in note 2 below or elsewhere in this Commodity Classification, all articles consisting wholly or partly of pearls, of precious stones or of semi-precious stones or of synthetic or reconstituted precious or semi-precious stones or of precious metal or rolled precious metal fall within this chapter.
The provision, however, set forth in paragraph 1 applies to goods consisting partly of precious metal or rolled precious metal only where such goods, if classified for statistical purposes according to the general rules of the Customs Tariff, would be subject to a lower rate of duty.
2. This chapter does not include:
 - a) Articles in which precious metal or rolled precious metal constitutes only minor trimmings (e.g. initials, monograms, eyelets, rings, edges), if such articles do not contain pearls, precious stones, semi-precious stones or synthetic or reconstituted precious and semi-precious stones;
 - b) Colloidal precious metal; amalgams of precious metal (Chapter 28);
 - c) Handbags and the like, travelling goods and other articles of a kind falling within Chapter 42;
 - d) Metallised yarn, woven fabrics of precious metal yarn or of yarn metallised with precious metal (Chapter 57) or articles of such products of a kind falling within Section XI (textiles, etc.);
 - e) Articles of a kind falling within Chapter 64 (footwear, etc.) or within Chapter 65 (headgear, etc.);
 - f) Umbrellas, walking-sticks or other articles of a kind falling within Chapter 66;
 - g) Fans (Chapter 67);
 - h) Coin (Chapter 72 or 99);
 - i) Tools (Section XV); machinery, mechanical appliances and electrical goods (Section XVI); parts, however, consisting wholly of precious stones, semi-precious stones or synthetic or reconstituted precious stones remain within this chapter;

XIV. Pearls, precious stones & metals & art. thereof; fancy imit. jewellery; coin

 - l) Arms or parts thereof (Chapter 93);
 - m) Articles of a kind falling within Chapter 98, excluding buttons, combs, hair-slides and similar articles;
 - n) Antiques (Chapter 99); pearls, precious stones and semi-precious stones remain, however, within this chapter irrespective of their age.
3. Precious metals are silver, gold, platinum and the metals of the platinum group.
4. Metals of the platinum group are iridium, osmium, palladium, rhodium and ruthenium.
5. Alloys (other than amalgams) of precious metal with base metal containing silver, gold, platinum or several of these metals and in which no one of these precious metals constitutes as much as two per cent by weight are treated like base metals.
Other alloys containing precious metals remain within this chapter and are treated as follows:
- a) All alloys containing two per cent or more by weight of platinum are treated in the same manner as platinum;
 - b) All alloys containing two per cent or more by weight of gold but not containing platinum or in which the content by weight of platinum is less than two per cent are treated in the same manner as gold;
 - c) All other alloys falling within this chapter are treated in the same manner as silver.
- In applying this provis on all metals of the platinum group are treated uniformly as platinum.
6. Except as otherwise provided the expression "precious metal" covers in all items in which such precious metal is specified also the alloys of precious metal which have according to General Note 5 been put on the same level with such precious metal. This does not, however, apply to precious metal rolled on base metal or to base metal plated or coated with platinum, gold or silver.
7. Rolled precious metals are products made with a base of metal upon one or more surfaces of which there is affixed by welding, hot-rolling or other mechanical means a covering of precious metal.
Articles of base metal imbedded with precious metal are to be treated in the same manner as precious metal-plated or coated articles.
8. For silver foil (item 7105 50) or gold foil (item 7107 50) fixed on any base, also the weight of the gold or silver used will have to be given apart from the total weight of the foil.

 - b) Alloys of base metals other than ferro-alloys falling within Chapter 73 and copper-alloys falling within Chapter 74 are treated in the same manner as the metal predominating by weight.

When such an alloy is composed of two or more base metals which are present in equal proportions by weight, the alloy is treated according to the customs tariff like the constituent metal chargeable with the highest rate of duty.

XV. Base metals and articles of base metals

- c) Unless otherwise provided, mention of a metal in any provision of this Classification is deemed to extend also to alloys of that metal.
4. Statistical treatment of composite articles.
Except where otherwise provided, manufactures composed of two or more base metals are treated in the same manner as articles of the base metal predominating by weight. The same rule applies also to articles composed of two or more base metals and non-metallic materials. When such an article is composed of two or more base metals which are present in equal proportions by weight, the article is treated like the constituent metal, chargeable with the highest rate of duty. For the purpose of this provision, cast iron, wrought iron and steel are regarded as a single metal; metal alloys are considered according to their classification under the provisions of general note 3 above.
5. Except where otherwise provided, articles are regarded as "unworked" or "worked" according to the following definitions:
- a) "Unworked" articles are articles manufactured by casting, sintering, forging, rolling, drawing, pressing or extruding, without further processing. Articles made from metals previously patterned in the course of rolling are likewise deemed to be unworked.
The term "worked" does not apply to the removal of unevenness, rough spots, edges, seams or other casting and stamping marks by rough grinding or rough scouring, the removal of dead-heads or of defective ends, rough sand-blasting, rough scaling, scraping or pickling.
- b) Worked articles are articles assembled from parts and articles which have undergone any process other than those specified under paragraph a) above, in particular, goods which have been turned, planed, filed, ground, drilled, threaded, engraved, polished, blued, parkerised, bronzed, or plated or coated with silver, gold, platinum or with base metal or materials other than those specified in General note 6.
6. Application of rough coats obviously destined for anti-oxidation does not affect classification and the articles are consequently not treated as worked, polished or coated articles. This ruling applies to all metal articles, including metal articles falling within other sections of this classification.
7. "Clad" base metals are products of base metals obtained by rolling together or welding, on one or more surfaces (top, bottom or sides), one or more layers of various base metals (steel of different composition or non-ferrous metals), irrespective whether the entire surface is clad or not.
Non-ferrous metals clad with iron or other base metals are treated as coated metals (Chapter 74 et sequ.).

XV. Base metals and articles of base metals

8. In order to be treated as scrap, articles (cracked, broken or worn out) must be fit only for re-smelting for re-forging or for chemical use.
9. Platinised articles of base metal (i.e. articles of base metal covered with platinum or other metals of the platinum group) are treated in the same manner as similar articles plated or coated with gold or silver.

XV. Base metals and articles of base metals

Chapter 73

a) Pig iron (items 7301 07 to 7301 90):

Pig iron is a product containing, by weight, 1,9 per cent or more of carbon and containing one or more of the following alloy elements in the specified proportions:

less than 15 per cent of phosphorus,
not more than 8 per cent of silicon,
not more than 6 per cent of manganese,
not more than 30 per cent of chromium,

- 0,10 per cent or more of sulphur,
- 0,20 per cent or more of phosphorus and sulphur, taken together,
- 0,10 per cent or more of every other single element.

A distinction is to be made between:

Alloy steel, generally called "structural steel", which contains less than 0,60 per cent of carbon and whose total content of alloy elements, moreover, does not exceed 8 per cent altogether in the case of at least two alloy elements being present and 5 per cent in the presence of only one alloy element.

Alloy special steel which contains less than 40 per cent of alloy elements in the presence of at least two alloy elements, and less than 20 per cent in the presence of only one alloy element, and

Other alloy steel showing the characteristics specified in the first paragraph of note 1d, but not corresponding to the definitions given for "structural steel" and alloy special steel.

XV. Base metals and articles of base metals

In defining the content of alloy elements in the case of the two kinds of alloyed steel mentioned first, sulphur, phosphorus, silicon and manganese are not deemed to be alloy elements, if the content thereof is less than has been specified in the first paragraph of note 1d.

- e) High carbon steel (items 7315 01 to 7315 99):
High carbon steel is steel containing 0,60 per cent or more, but less than 1,9 per cent of carbon.

- o) Shipbuilding plates (items 7313 08 to 7313 09) are plates only hot rolled, of a thickness of 3 millimetres or more and a tensile strength of 41 to 56 kilograms per square millimetre. They have to be accompanied by a specification certificate of one of the following classification offices and have to be classified therein as shipbuilding plates. The plates have to bear a punching mark the form of which must be stated in the specification certificate. Classification offices for shipbuilding plates are:
Germanischer Lloyd, Britischer Lloyd, Bureau Veritas, Norske Veritas, Registro Italiano, British Standard Specification, A.S.T.M. Standards, American Bureau of Shipping.
