Introduction

“DIE kleine BRANDENBURG-STATISTIK 2008” (statistics for the Land of Brandenburg, 2008, key facts and figures) offers information on the development in the Land of Brandenburg based on the most important statistical results.

This document is divided into chapters on different topics. Chapters 1 – 27 present figures on Brandenburg’s demographic, economical, social, cultural and political structures. As far as possible, developments have been highlighted by including the figures for the years 1999, 2003 and 2007. The document also contains information on the administrative districts (Chapter 28), data on Brandenburg’s development since 1990 (Chapter 29) and accumulated figures for the region of Berlin / Brandenburg (Chapter 30).

At the end of 2007, Brandenburg had a population of 2.536 million, the lowest figure since German unification. The number of deaths exceeded the number of births by 8,077: 18,589 children were born in 2007 while 26,666 inhabitants died. The death surplus was lower than in 2006 (8,465). Brandenburg also suffered a migration loss of 3,397 residents. In 2007, the population of Brandenburg decreased by 0.5 per cent (12,000 residents less than in 2006).

Tourism in Brandenburg achieved the second record high since 2006: for 2007, accommodation providers reported 3.6 million guests (4.6 per cent more than in 2006) and 9.9 million overnight stays (4.0 per cent more than in 2006). The average duration of a stay decreased slightly from 2.7 to 2.6 days.

The gross domestic product (adjusted for price changes) increased by 2 per cent in 2007. Industry experienced particularly strong growth. The gross value added for manufacturing (adjusted for price changes), which caused significant growth impact, increased by 8.8 per cent from 2006 to 2007.

“DIE kleine BRANDENBURG-STATISTIK 2008” gives an initial overview of the data provided by official statistics. A brochure along the same lines has been published for the Land of Berlin (“DIE kleine BERLIN-STATISTIK 2008”). Those interested also can find a similarly structured selection of figures and data for the Federal Republic of Germany as well as benchmark figures for all German “Länder” in “Key Data on Germany”, published annually by the Federal Statistical Office.

This series of pictures was taken in the Berlin-Brandenburg region. It shows photographs on the production and consumption of energy. The contents of the photographs are independent of the statistical topic.

02.1 Population

Data on the total population as well as the demographic and regional distribution of the population are provided by censuses which are carried out at intervals of several years. Their findings serve as the basis for updating the official total population figure which is shown here (as of 31 December).

	Unit	1999	2003	2007

Other support	1000	48.7	39.9	24.0

Information on the economic and social situation of the population is provided by the micro-census. This involves an official, annually performed household survey which covers one percent of all households. These households are selected by means of a random mathematical procedure. Interviewers provide information about the survey which is performed on location.

Private households by monthly net income 2007

Multi-person households

Power and heat supply station Moabit → Berlin | night shot

04 Households and Families

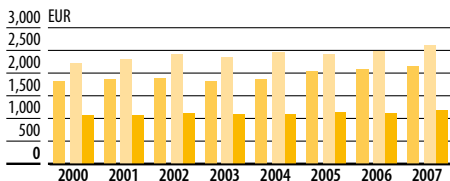

Every community of persons living together and forming an economical unit as well as persons who live alone and, nevertheless, manage for themselves are counted as a household (private household). A household may include relatives and persons who do not belong to the family as such (e.g. companions or partners in life). Married couples with children as well as single parents and unmarried couples with their unmarried children living in the same household are counted as families.

Private households by size of household	Unit	1999	2003	2007
Private households total	1000	1,145.5	1,202.0	1,243.9

16 Consumer Prices

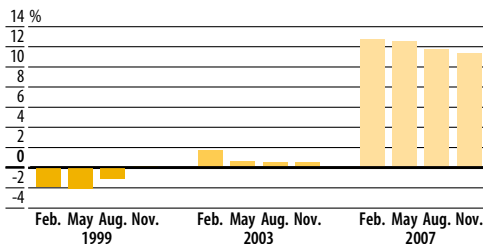

The consumer price index shows the monthly development of consumer prices. Thus it is considered to be a general measure of the change in the purchasing power of money. The basis for calculating the index is a commodity basket with approximately 750 goods and services (price representatives). In accordance with their share in the overall expenditures of private households in the respective price base year (here: 2000), they are incorporated into the index calculation with different values (weights).

Consumer price index for Brandenburg	Unit	1999	2003	2007
Total cost of living	index	91.0	96.4	104.0
Food and non-alcoholic beverages	index	93.9	99.0	106.7
Alcoholic beverages, tobacco	index	76.7	86.3	106.2

Multi-family homes				
excl. decorative repairs	index	100.4	99.5	116.0
Decorative repairs	index	100.7	89.1	88.6

The construction price indices show the quarterly development of the prices realised by Brandenburg building companies for certain types of construction work and certain types of structures as well as for various types of maintenance work on buildings, independently of the site of performance. The selected construction work and building types are also included in a uniform federal weighting scheme of specified shares (weights) when it comes to calculating the price index. The base year for the building cost indices at present is 2000.

18 Building Activity, Dwellings

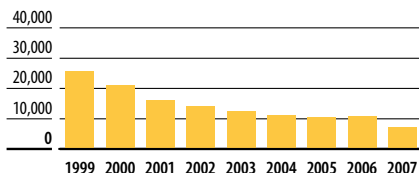

The building statistics include all aspects of building, from planning to the finished building product. The relevant information is provided not only by the monthly and annual construction industry statistics, but also building activity statistics in particular. The building and housing stock is updated with the building activity statistics in between the building and housing census. The basis for updating is provided by the census of 1995.

21 Foreign Trade

The foreign trade statistics provide figures with regard to the movement of goods across the frontiers (import and export) between Brandenburg and foreign countries. The basis for the results is provided by the customs documents of importers and exporters in the trading industry with countries outside of the European Union (extra trade) as well as the statistical registrations of acquisitions and deliveries within the community within the meaning of the Value-Added Tax Law (intra trade).

National account (VGR) are a statistical system for presenting a comprehensive, overall picture of the economic activities of all business entities in Brandenburg. It is based on the European System Accounts (ESA 1995) and the Klassifikation der Wirtschaftszweige (WZ 2003) (Classification of Industries). At the centre of national account is the origin of the gross domestic product (GDP) as a measure of performance in Brandenburg.

	Unit	1999	2003	2007 ¹

23.1 Employment and Compensation of Employees

The number of employed persons along with their wages and salaries are determined within the scope of national account. The figures on the number of employed persons correspond to the workplace concept; that is, all employed persons who have their job in Brandenburg are taken into consideration. In the result for income creation the figure for employee earnings reflects all of the cash and non-cash benefits accrued to employees working in Berlin from work or other employment relationships.

	Unit	1999	2003	2007 ¹
