Für Benutzer der amtlichen Statistik steht als Service-Einrichtung des Statistischen Bundesamtes das EDV-gestützte **STATISTISCHE INFORMATIONSSYSTEM DES BUNDES** (Statis-BUND) zur Verfügung. Es enthält - auch aus dem Bereich der laufenden Verdiensterhebung - ausgewählte statistische Zeitreihen und bietet die Möglichkeit, eigene Auswertungen, Berechnungen und mathematisch-statistische Analysen durchzuführen. Darüber hinaus können Zeitreihensegmente auf Magnetband und Diskette - auf Wunsch auch im Abonnement vierteljährlich oder jährlich - bezogen werden. Der lohnstatistische Ergebnismachweis für die neuen Bundesländer ist noch nicht im STATIS-BUND aufgenommen.

Erläuterungen zur Methode dieser Statistik sind in der früheren Fachserie M "Preise, Löhne, Wirtschaftsrechnungen", Reihe 15, Teil I, Februar/Mai 1957, Februar 1959, August 1961, Oktober 1964, Januar 1966, Januar 1972, Januar 1973, sowie in "Wirtschaft und Statistik", Heft 12/1979, Heft 9/19 enthalten. Die methodischen Grundlagen der Indizes auf der Basis 1980 sind im Heft 8/1985 von "Wirtschaft und Statistik" veröffentlicht.

Einführung

Die laufende Verdiensterhebung in Industrie und Handel wird nach dem Lohnstatistikgesetz¹⁾ in vierteljährlichen Abständen für die Monate Januar, April, Juli und Oktober durchgeführt. Ihre Ergebnisse informieren über die absolute Höhe der durchschnittlichen Verdienste in der Industrie, im Handel, Kredit- und Versicherungsgewerbe sowie der Wochenarbeitszeiten der Arbeiter in der Industrie. Die laufenden Erhebungen haben in erster Linie die Aufgabe, die Entwicklung der effektiven Bruttoverdienste ausgewählter Arbeitnehmergruppen nach Wirtschaftszweigen und Geschlecht in regelmäßigen, relativ kurzfristigen Zeitabständen sowie im jährlichen Verlauf darzustellen. Zu diesem Zweck werden vierteljährlich und jährlich langfristige Indexreihen auf der Grundlage der Ergebnisse der laufenden Verdiensterhebung ergänzt und veröffentlicht, die für die Verdienste der Industriearbeiter bis in das Jahr 1913/14 zurückreichen (vgl. Tabelle, Seite 7). Zur Zeit werden diese Indizes auf der Basis 1985 = 100 ermittelt. Ihre Umstellung auf der Basisjahr 1991 = 100 ist im Laufe des Jahres 1994 vorgesehen. Für die neuen Länder und Berlin-Ost werden noch keine Verdienstindizes berechnet.

Die Verdiensterhebung wird auf repräsentativer Grundlage bei ausgewählten Betrieben durchgeführt (Stichprobenerhebung). Im früheren Bundesgebiet werden seit dem Berichtsmontat Januar 1992 etwa 10 % und in den neuen Ländern und Berlin-Ost seit dem Berichtsmontat Oktober 1992 etwa 25 % der Betriebe mit 10 und mehr Beschäftigten in der Verarbeitenden Industrie sowie in der Energie- und Wasserversorgung bzw. mit 5 und mehr Beschäftigten im Hoch- und Tiefbau (mit Handwerk) zur laufenden Verdiensterhebung herangezogen. Nach der Systematik der Wirtschaftszweige, Ausgabe 1979, erstreckt sich die Erhebung der Verdienste der Arbeiter auf die Wirtschaftsabteilungen 1 und 2 (ohne Handwerk) sowie auf die Gruppe 300.

Bei den nachgewiesenen Wochenarbeitszeiten, Bruttostunden- und Bruttowochenverdienste handelt es sich um Durchschnittsangaben je Arbeiter. Sie werden nicht als individuelle Angabe für einzelne Beschäftigte, sondern als Lohnsummen für die jeweiligen Beschäftigtengruppen nach der Summenmethode aus der betrieblichen Abrechnung, erfaßt, z.B. Bruttolohnsumme der weiblichen Arbeiter in einer Leistungsgruppe (vgl. Stichwort "Leistungsgruppen").

Einer Leistungsgruppe entsprechen in der Regel eine oder mehrere Lohngruppen.

Durchschnittsangaben für mindestens 10, aber weniger als 30 "erfaßte Arbeiter" sind in Klammern gesetzt, weil sie wegen ihres hohen Zufallsfehlers (einfacher relativer Standardfehler über 5 %) unsicher sind. Durch-

schnittsangaben für weniger als 10 "erfaßte Arbeiter" werden nicht nachgewiesen.

Betrieb im Sinne der Erhebung ist die "örtliche Niederlassung", das sind die jeweils räumlich zusammenhängenden Teile eines Unternehmens.

Erfaßter Personenkreis: In die Verdiensterhebung werden alle Arbeiter der erfaßten Betriebe einbezogen, mit Ausnahme der Arbeiter, die wegen Krankheit, Einstellung oder Entlassung nicht für den ganzen Erhebungsmonat entlohnt wurden. Nicht erfaßt werden ferner: Teilzeitbeschäftigte Arbeiter, Auszubildende, mithelfende Familienangehörige sowie Arbeiter, die als Empfänger von Renten aus der gesetzlichen Rentenversicherung ein vermindertes Arbeitsentgelt bezogen. Als Arbeiter gelten alle Personen in abhängiger Stellung, die der Versicherungspflicht in der Arbeiterrentenversicherung unterliegen. In den neuen Ländern und Berlin-Ost werden auch von Kurzarbeit betroffene Arbeitnehmer, deren Kurzarbeit drei Tage bzw. 24 Arbeitsstunden im Berichtsmonat überschritt, nicht in die Erhebung einbezogen.

Bezahlte Wochenstunden: Als bezahlte Arbeitszeit gelten die effektiv geleisteten Stunden (dies sind in der Regel die "hinter der Stechuhr", d.h. innerhalb der Arbeitsstätte bzw. auf der Arbeitsstelle verbrachten Zeiten abzüglich allgemein betrieblich festgesetzter Ruhepausen wie z.B. die Mittagszeit) zuzüglich der bezahlten Ausfallstunden, z.B. für bezahlte Krankheitstage, gesetzliche Feiertage, bezahlten Urlaub, bezahlte Arbeitspausen, bezahlte Freizeit aus betrieblichen und persönlichen Gründen (Betriebsversammlungen, Betriebsausflüge, Arztbesuche, Familienfeiern u.ä.).

Bruttoverdienst: Der "Bruttoverdienst" umfaßt alle Beträge, die dem Arbeitnehmer laufend vom Arbeitgeber gezahlt werden, das ist normalerweise der tarifliche oder frei vereinbarte Lohn einschließlich tariflicher und außertariflicher Leistungs-, Sozial- und sonstiger Zulagen und Zuschläge. Nicht zum Bruttoverdienst rechnen alle Beträge, die nicht der Arbeitstätigkeit in der Erhebungszeit zuzuschreiben sind (z.B. Nachzahlungen) sowie Spesenersatz, Trennungsentschädigung, Auslösungen usw. Auch alle einmaligen Zahlungen wie Gratifikationen, Jahresabschlußprämien, Gewinnanteile, Gewinnbeteiligungen, zusätzliches Urlaubsgeld und nicht regelmäßige vermögenswirksame Leistungen werden nicht einbezogen, es sei denn, sie werden in monatlichen Teilbeträgen laufend bezahlt.

Im Berichtsmontat Januar liegt bei den Betrieben des Hoch- und Tiefbaus (Wirtschaftsgruppe 300 ohne 300 5) aus witterungsbedingten Gründen gelegentlich eine so geringe Beschäftigung vor, daß in einzelnen Bundesländern keine hinreichend genauen und der Zielsetzung der Verdienstatistik entsprechenden Arbeitszeiten und Verdienste ermittelt werden können. In diesen Fällen werden aus den Erhebungsergebnissen der vergangenen Berichtsmontate länderspezifische Prognosewerte berechnet und ersatzweise für die Ermittlung der Bundesergebnisse verwendet.

1) Gesetz über die Lohnstatistik in der im Bundesgesetzblatt Teil III, Gliederungsnummer 800-16, veröffentlichten bereinigten Fassung, zuletzt geändert durch Artikel 8 der Verordnung vom 26. März 1991 (BGBl. I S. 846).

Leistungsgruppen: Für Zwecke der statistischen Analyse werden Leistungsgruppen gebildet, die eine grobe Abstufung nach der Qualifikation darstellen. In einer Leistungsgruppe sind aus jedem in der Erhebung angewandten Tarifvertrag eine oder mehrere Lohngruppen zusammengefaßt.

Leistungsgruppe 1: Arbeiter, die auf Grund ihrer Fachkenntnisse und Fähigkeiten mit Arbeiten beschäftigt werden, welche als besonders schwierig oder verantwortungsvoll oder vielgestaltig anzusehen sind. Die Befähigung kann durch abgeschlossene Lehre oder durch langjährige Beschäftigung bei entsprechenden Arbeiten erworben sein. In den Tarifen sind die Angehörigen dieser Gruppe meist als Facharbeiter, auch qualifizierte oder hochqualifizierte Facharbeiter, Spezialfacharbeiter, Facharbeiter mit meisterlichem Können, Meister und Vorarbeiter im Stundenlohn, Betriebshandwerker, gelernte Facharbeiter, Facharbeiter mit Berufsausbildung und Erfahrung und ähnlich bezeichnet.

Leistungsgruppe 2: Arbeiter, die im Rahmen einer speziellen meist branchengebundenen Tätigkeit mit gleichmäßig wiederkehrenden oder mit weniger schwierigen und verantwortungsvollen Arbeiten beschäftigt werden, für die keine allgemeine Berufsbefähigung vorausgesetzt werden muß. Die Kenntnisse und Fähigkeiten für diese Arbeiten haben die Arbeiter meist im Rahmen einer mindestens 3 Monate dauernden Anlernzeit mit oder ohne Abschlußprüfung erworben. In den Tarifen werden die hier erwähnten Arbeiter meist als Spezialarbeiter, qualifizierte angelernte Arbeiter, angelernte Arbeiter mit besonderen Fähigkeiten, angelernte Arbeiter, vollwertige Betriebsarbeiter, angelernte Hilfsarbeiter, Betriebsarbeiter und ähnlich bezeichnet.

Leistungsgruppe 3: Arbeiter, die mit einfachen, als Hilfsarbeiten zu bewertenden Tätigkeiten beschäftigt sind, für die eine fachliche Ausbildung auch nur beschränkter Art nicht erforderlich ist. In den Tarifen werden diese Arbeiter meist als Hilfsarbeiter, ungelernte Arbeiter, einfach Arbeiter und ähnlich bezeichnet.

Indizes: Die Indizes der durchschnittlich bezahlten Wochenstunden bzw. der durchschnittlichen Bruttoverdienste der Arbeiter schalten den Einfluß der Veränderungen in der Zusammensetzung der Arbeiterschaft - auch im Falle eines Berichtskreiswechsels - aus und zeigen, wie sich die durchschnittlich bezahlten Wochenstunden bzw. die durchschnittlichen Bruttoverdienste der Arbeiter verändert hätten, wenn im jeweiligen Vergleichszeitpunkt die gleiche Struktur der Arbeiterschaft bestanden hätte wie im Basiszeitraum. Die Wertgewichte für die Wägung der Verdienstreihen wurden durch Multiplikation der Personenzahlen in den einzelnen Arbeitergruppen mit ihrem durchschnittlichen Verdienst bzw. für den Arbeitszeitindex mit der Zahl der durchschnittlich bezahlten Wochenstunden im Basisjahr gewonnen.

Aus den angegebenen Indexzahlen läßt sich die Indexentwicklung nach Punkten als Differenz zwischen dem neuen und dem alten Indexstand errechnen, die Indexentwicklung in Prozent nach der Formel

$$\frac{\text{Neuer Indexstand}}{\text{Alter Indexstand}} \times 100 - 100.$$

Beispiel: Von 1981 bis 1987 stieg der Index der durchschnittlichen Bruttostundenverdienste für alle Arbeiter von 87,0 auf 107,6 d.h. um $107,6 - 87,0 = 20,6$ Punkte, aber um

$$\frac{107,6}{87,0} \times 100 - 100 = 23,7\%.$$

Die nachgewiesenen Indizes beziehen sich auf das Basisjahr 1985. Wird ein anderes Basisjahr gewünscht (Umbasierung), sind sie nach der Formel

$$\frac{\text{Index des Beobachtungsjahres}}{\text{Index des gewünschten Basisjahres}} \times 100$$

umzurechnen.

Beispiel: Für 1987 lautet der Index der durchschnittlichen Bruttostundenverdienste für alle Arbeiter auf der Basis 1980 = 100

$$\frac{107,6}{82,5} \times 100 = 130,4.$$

Langfristige Indexreihe der Industriearbeiterverdienste

Das Statistische Bundesamt hat auf der Basis 1985 = 100 für die Arbeiter in der Industrie (einschl. Hoch- und Tiefbau mit Handwerk) Jahresindizes der durchschnittlichen Bruttostundenverdienste und der durchschnittlichen Bruttowochenverdienste für 1938 und für alle Jahre seit 1950 ermittelt. Das Statistische Reichsamt berechnete ähnliche Indizes für die Jahre 1913/14 und 1925 bis 1944 auf der Basis 1936 = 100 (vgl. u.a. Statistisches Jahrbuch für das Deutsche Reich, Jahrgang 1941/42). Verknüpft man beide Indexreihen miteinander, ergeben sich die nachstehend aufgeführten Werte auf der Basis 1936 = 100 und 1985 = 100. Wird ein anderes Basisjahr gewünscht (Umbasierung), sind sie, wie oben beschrieben, umzurechnen. Dabei muß darauf geachtet werden, daß die Werte im Zähler und im Nenner entweder beide der Indexreihe 1936 = 100 oder beide der Indexreihe 1985 = 100 entnommen werden. Das Ergebnis ist in jedem Fall - von Rundungsdifferenzen abgesehen - das Gleiche.

Beispiel: Für 1987 wird ein Index der Bruttostundenverdienste auf der Basis 1981 = 100 gewünscht. Der Rechenansatz lautet dann entweder

$$\frac{2289,4}{1851,1} \times 100 \text{ oder } \frac{107,6}{87,0} \times 100.$$

Ergebnis in beiden Fällen: 123,7.

Bei der Verknüpfung der beiden Indexreihen mußten methodische und systematische Abweichungen außer acht gelassen werden (z.B. Unterschiede im Gebietsstand, Unterschiede in der Abgrenzung und der Zahl der erfaßten Wirtschaftszweige, Unterschiede in der Beschäftigtenstruktur). Die ermittelten Werte sind deshalb mit Vorbehalt zu interpretieren.

Sie vermitteln jedoch eine ungefähre Größenvorstellung, wie sich die Verdienste im Laufe der Zeit geändert haben.

Erläuterung zu Tabelle 2 des Tabellenteils

Die %-Zahlen beziehen sich:
bei den Leistungsgruppen auf die Gesamtzahl der männlichen bzw. weiblichen Arbeiter eines Wirtschaftszweiges, bei den "männlichen Arbeitern zus." bzw. "weiblichen Arbeitern zus." auf die Gesamtzahl der Arbeiter eines Wirtschaftszweiges (außer Bergbau sowie Hoch- und Tiefbau), bei "allen Arbeitern" eines Wirtschaftszweiges und bei Bergbau sowie Hoch- und Tiefbau "männliche Arbeiter zus." auf die Gesamtzahl der Arbeiter in der Industrie (einschl. Hoch- und Tiefbau mit Handwerk).

Für einen Vergleich der absoluten Werte des neuen Berichtskreises mit denen des alten Berichtskreises können letztere durch Multiplikation mit diesem Faktor auf ein ungefähr vergleichbares Niveau gebracht werden. Bei den Indizes ist dies nicht erforderlich, weil Sie bereits durch ein besonderes Umrechnungsverfahren vergleichbar gemacht worden sind.

Für einen Vergleich der absoluten Werte des neuen Tarifstarke mit denen des alten Tarifstarke können letztere durch Multiplikation mit diesem Faktor auf ein ungefähr vergleichbares Niveau gebracht werden. Bei den Indizes ist dies nicht erforderlich, weil Sie bereits durch ein besonderes Umrechnungsverfahren vergleichbar gemacht worden sind.
