1 Environmental-Economic Accounting of the Federal Statistical Office

Environmental-Economic Accounting (EEA) describes the **interrelationship between the economy and the environment**. For its economic activities, production and consumption an economy not only uses labour and produced assets but also natural assets. Natural assets include raw materials such as sources of energy, ores, other minerals and water as well as land that serves as a location for production, consumption and various leisure activities. These parts of natural assets are used directly. Other components of natural assets are ecosystems and other natural systems such as the atmosphere. They support economic activities by absorbing and eliminating residues and pollutants arising from production and consumption, such as atmospheric emissions, waste and effluent.

Figure 1 shows the interrelationship between economy¹ and environment. On the one hand natural assets are used as input for the economic process. On the other hand the economy discharges residues and pollutants.

Figure 1: Interrelationship economy environment

The use of natural assets – similar to the produced capital stock – generally involves depletion, which means that the burden or **impact on the environment** causes changes in its state and/or natural assets. On the one hand, these changes are of a quantitative nature (e.g. a decreasing amount of non-renewable raw materials); on the other, they have many qualitative aspects (deteriorating air quality due to emissions of pollutants, diminished biodiversity etc.). Attempts are being made to prevent these negative changes with targeted, appropriate environmental protection measures, such as by avoiding environmental burden (e.g. desulphurising flue gas) or remedying damage that has already been done (e.g. cleaning up polluted sites). The interdependencies between the economy and the environment therefore are not restricted to showing the burdens on the environment; in fact the pattern also includes changes to the state of

¹ Both are shown in the simplified form in the diagram.

the environment brought about by pollution and the steps taken to avoid it or repair the damage.

The EEA aims to describe all three forms of interdependence between economy and environment – environmental burden, the environmental state and environmental measures. The description of these interdependencies takes as its starting point the fact, mentioned above, that a national economy not only uses labour and capital but also nature. Therefore, the basic idea is to take the commonly accepted definition of a national economy and expand it by a "factor nature". The System of National Accounts (SNA) provides a comprehensive and systematic definition of economic activity. Principally, they show monetary transactions (flows) and assets using standardised classifications. EEA were conceived as a satellite system for the national accounts, the objective of which is to extend the presentation of the economic process by a depiction of the interrelationship between the economic system and the environment. The environmental flows and inventories are almost always presented in physical units. For example, air emissions are expressed in tonnes, energy consumption in Terajoules, area used for transport and settlement purposes (land use) in square metres.

An important feature is the full compatibility of both systems – the national accounts and the EEA. The underlying concepts, definitions, distinctions, and classifications in both systems match as far as this is logically sensible and possible. This also applies and particularly so for the economic classifications used in the EEA and the SNA. Because of these common concepts, definitions, distinctions and classifications the results of the EEA can be linked internally and to the identically categorised SNA data and they can be analysed jointly. Compatibility with the national accounts permits for example to relate the environmental parameters, which are mostly shown in physical units (such as in tonnes), to the economic indices (in euros). Of particular importance here are the data on the efficiency of environmental use, expressed as an arithmetical ratio of the figure of interest (such as raw materials consumption) to the gross value added (GVA) or to the gross domestic product (GDP). With regard to the details of calculating productivities and intensities see the notes on the tables in Part 1.

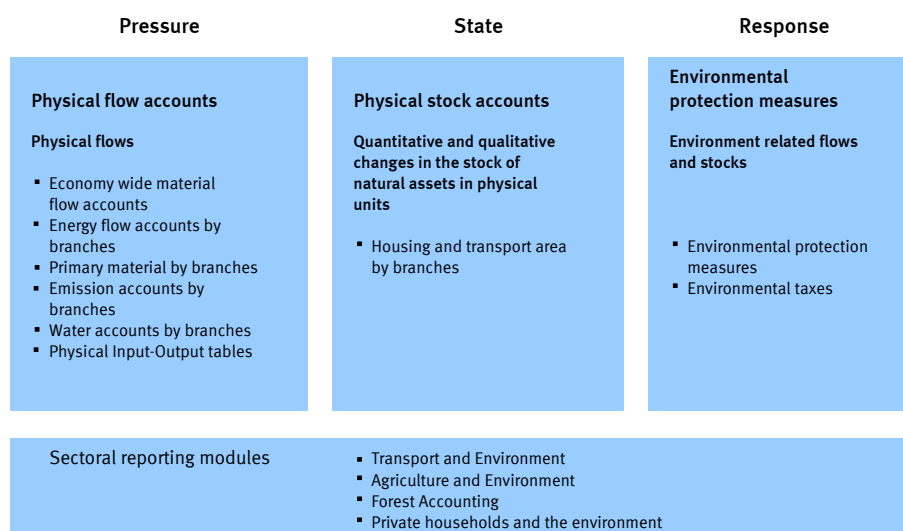

The concept underlying the EEA is to express the status quo and the change in natural assets in units of money, so as to be able to determine what is known as corrected macro-economic aggregates, such as the ecological domestic product. Particularly insofar as such evaluations do not assess the quantitative decrease of resources, but refer to qualitative changes of other components, they are problematic in many respects with regard to the methods used (valuation/aggregation problems, restricted knowledge about correlation between cause and effect and considerable regional differences). That is why such calculations tend not to be carried out by the Federal Statistical Office but by scientific research institutes. Consequently, when presenting environmental pollution and the state of the environment EEA of the Federal Statistical Office is restricted to physical data.

Environmental economic accounts and national accounts describe two dimensions of sustainable development – economy and environment – and their interrelationship. Therefore they provide an important and useful data base for political discussions concerning sustainability.

Figure 2 shows the different reporting **modules of the EEA** of the Federal Statistical Office. They reflect the internationally recognized pressure-state-response model, used to statistically show correlations between the environment and the economy. The **environmental pressures** reporting module shows the material flows listed behind it: the amount of raw materials extracted per year, the amount of pollutants emitted per year etc. This reporting module does not include produced goods or services, but raw materials extracted from nature and residual materials and hazardous substances emitted back into nature. The respective flows for each type of material are booked as

consolidated quantities, in what is known as the material account, which charts the flows of material between a national economy and both the natural environment and the world's other national economies.

Figure 2: Modules of German Environmental-Economic Accounting

At present, the **state of the environment** reporting module of the German EEA only expresses the component of the natural capital presented by land area. Especially land use by housing and transport are in the focus of this reporting module. Looking at how much land area is used by which economic stakeholder, however, can not be realised for the time being. Landscapes and ecosystems form yet another essential component of the natural capital, which should principally be included by accounting. In Germany these aspect are dealt with by Agency for Nature Protection, not by environmental economic accounts. Displaying the stocks of mineral resources – a third aspect of the natural assets, which may be of great importance for countries rich in raw materials – has a fairly low priority as far as German EEA is concerned and has so far not been considered. A reporting module has so far only been developed for forest.

In the module **environmental protective measures**, components already included in the monetary transactions of the national accounts are shown separately and, as a rule, broken down further. Here, for example, environmentally relevant taxes, such as vehicle tax or fuel tax, are shown. Another important part of environmental protective measures consist of investment and ongoing expenditure for environmental protection in the government and manufacturing industry sectors, as well as privatised public enterprises. Contrary to the physical electric power accounts of the material and energy flow accounts and the physical asset accounts describing the state of the environment, the EEA shows the environmental protective measures in the form of monetary accounts.

The **sectoral reporting modules**, presently used for the transport, agriculture, forestry, and private households sectors, enable extending the EEA standard programme by single items for politically significant topics. For such sectors, these reporting modules provide a much more detailed picture of the complete range of interdependencies between the environment and the economy, across the EEA components mentioned above.

Typical of EEA is considering the environmental impact (removing raw materials, land use, services of the environment) of economic activities from two angles: the first question is to what extent an environmental factor enters the economic cycle or is adversely affected in production or consumption of private households. Apart from this it is however also important to know what quantities of environmental factors are being employed and for what final purpose. This second assessment not only assigns directly consumed factor components to a specific category of use (such as the consumption activities of private households), but also those quantities needed to manufacture all the goods consumed by the households (at all stages of the production process) and therefore consumed, as it were, "indirectly" by the households. This contrasting of **direct and indirect parameters** is comparable with the presentation of origin and use in the national accounts, and applies to numerous subjects of EEA.

"Upstream" indirect consumption cannot be derived from the accounting system directly. Allocation takes place through a model approach based on input-output tables (IOT). IOTs are central elements of the national accounts; they include details of the upstream interdependencies between the individual production sectors, to name just one example.

The concept of Environmental Economic Accounts was established and further developed at **international level** by the United Nations, in particular, and adopted in February 2012 as an international statistical standard "System of Integrated Environmental and Economic Accounting (SEEA Central Framework 2012)"². In Germany substantial sections of the environmental economic accounts are drawn up based on these conceptual proposals in the SEEA.

2 Overview on classification

2.1 Classification of homogeneous branches

No.	Branches	Classification of products by activity (CPA) in the European Community	
		Designation	No.
1	Products of agriculture, forestry and fishing	Products of agriculture, forestry and fishing	A
2	Products of agriculture, hunting and related services	Products of agriculture, hunting and related services	01
3	Products of forestry, logging and related services	Products of forestry, logging and related services	02
4	Fish and other fishing products; aquaculture products	Fish and other fishing products; aquaculture products; support services to fishing	03
5	Mining and quarrying	Mining and quarrying	B
6	Coal and lignite	Coal and lignite	05
7	Crude petroleum and natural gas	Crude petroleum and natural gas	06
8	Metal ores, other mining and quarrying products	Metal ores, other mining and quarrying products; mining support services	07 – 09
9	Manufactured products	Manufactured products	C
10	Food products; beverages; tobacco products	Food products; beverages; tobacco products	10 – 12
11	Textiles; wearing apparel; leather and related products	Textiles; wearing apparel; leather and related products	13 – 15
12	Wood and products of wood and cork, except furniture	Wood and products of wood and cork, except furniture; articles of straw and plaiting materials	16
13	Paper and paper products	Paper and paper products	17
14	Printing and recording services	Printing and recording services	18
15	Coke and refined petroleum products	Coke and refined petroleum products	19
16	Coke oven products	Coke oven products	19.1
17	Refined petroleum products	Refined petroleum products	19.2
18	Chemicals and chemical products	Chemicals and chemical products	20
19	Basic pharmaceutical products and pharmaceutical preparations	Basic pharmaceutical products and pharmaceutical preparations	21

Introduction

No.	Branches	Classification of products by activity (CPA) in the European Community	
		Designation	No.
20	Rubber and plastic products	Rubber and plastic products	22
21	Other non-metallic mineral products	Other non-metallic mineral products	23
22	Glass and glass products	Glass and glass products	23.1
23	Refractory products, cut, shaped and finished stone	Refractory products; clay building materials; other porcelain and ceramic products; cement, lime and plaster; articles of concrete, cement and plaster; cut, shaped and finished stone; other non-metallic mineral products	23.2 – 23.9
24	Basic metals	Basic metals	24
25	Basic iron and steel and ferro-alloys, other products of steel	Basic iron and steel and ferro-alloys; tubes, pipes, hollow profiles and related fittings of steel; other products of the first processing of steel	24.1 – 24.3
26	Basic precious and other non-ferrous metals	Basic precious and other non-ferrous metals	24.4
27	Casting services of metal	Casting services of metal	24.5
28	Fabricated metal products, except machinery and equipment	Fabricated metal products, except machinery and equipment	25
29	Computer, electronic and optical products	Computer, electronic and optical products	26
30	Electrical equipment	Electrical equipment	27
31	Machinery and equipment n. e. c.	Machinery and equipment n. e. c.	28
32	Motor vehicles, trailers and semi-trailers	Motor vehicles, trailers and semi-trailers	29
33	Other transport equipment	Other transport equipment	30
34	Furniture, other manufacture goods	Furniture, other manufacture goods	31 – 32
35	Repair and installation services of machinery and equipment	Repair and installation services of machinery and equipment	33
36	Electricity, gas, steam and air conditioning	Electricity, gas, steam and air conditioning	D
37	Electricity, transmission and distribution services, steam	Electricity, transmission and distribution services; steam and air conditioning supply services	35.1, 35.3

Introduction

No.	Branches	Classification of products by activity (CPA) in the European Community	
		Designation	No.
38	Manufactured gas	Manufacture gas; distribution services of gaseous fuels through mains	35.2
39	Water supply; sewerage, waste management and remediation services	Water supply; sewerage, waste management and remediation services	E
40	Natural water; water treatment and supply services	Natural water; water treatment and supply services	36
41	Sewerage services; waste collection and material recovery services	Sewerage services; waste collection and material recovery services	37 – 39
42	Sewerage services, sewerage sludge	Sewerage services, sewerage sludge	37
43	Waste collection, treatment and disposal services	Waste collection, treatment and disposal services; materials recovery services; remediation services and other waste management services	38 – 39
44	Constructions and construction works	Constructions and construction works	F
45	Building and building construction works	Building and building construction works	41 – 42
46	Specialised construction works	Specialised construction works	43
47	Wholesale and retail trade services; repair services of motor vehicles	Wholesale and retail trade services; repair services of motor vehicles and motorcycles	G
48	Wholesale and retail trade and repair services of motor vehicles	Wholesale and retail trade and repair services of motor vehicles and motorcycles	45
49	Wholesale trade services, except of motor vehicles and motorcycles	Wholesale trade services, except of motor vehicles and motorcycles	46
50	Retail trade services, except of motor vehicles and motorcycles	Retail trade services, except of motor vehicles and motorcycles	47
51	Transportation and storage services	Transportation and storage services	H
52	Passenger rail transport services, freight rail transport services	Passenger rail transport services, interurban; freight rail transport services	49.1 – 49.2
53	Other passenger land transport services, transport services via pipeline	Other passenger land transport services; freight transport services by road and removal services; transport services via pipeline	49.3 – 49.5

Introduction

No.	Branches	Classification of products by activity (CPA) in the European Community	
		Designation	No.
54	Water transport services	Water transport services	50
55	Air transport services	Air transport services	51
56	Warehousing and support services for transportation	Warehousing and support services for transportation	52
57	Postal and courier services	Postal and courier services	53

67	Other services	Arts, entertainment and recreation services; other services; services of households as employers; undifferentiated goods and services produced by households for own use	R – T
68	All homogeneous branches	All homogeneous branches	

Introduction

2.2 Classification of industries

No.	Industries	Classification of economic activities, 2008 edition	
		Designation	No.
1	Agriculture, forestry and fishing	Agriculture, forestry and fishing	A
2	Crop and animal production, hunting and related services	Crop and animal production, hunting and related services	01
3	Forestry and logging	Forestry and logging	02
4	Fishing and aquaculture	Fishing and aquaculture	03
5	Mining and quarrying	Mining and quarrying	B
6	Mining of coal and lignite	Mining of coal and lignite	05
7	Extraction of crude petroleum and natural gas	Extraction of crude petroleum and natural gas	06
8	Mining of metal ores, other mining and quarrying	Mining of metal ores; other mining and quarrying; mining support service activities	07 – 09
9	Manufacturing	Manufacturing	C
10	Manufacture of food products, beverages and tobacco products	Manufacture of food products; manufacture of beverages and manufacture tobacco products	10 – 12
11	Manufacture of textiles, wearing apparel, leather	Manufacture of textiles; manufacture of wearing apparel; manufacture of leather and related products	13 – 15
12	Manufacture of wood and products of wood and cork, except furniture	Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials	16
13	Manufacture of paper and paper products	Manufacture of paper and paper products	17
14	Printing and reproduction of recorded media	Printing and reproduction of recorded media	18
15	Manufacture of coke and refined petroleum products	Manufacture of coke and refined petroleum products	19
16	Manufacture of coke oven products	Manufacture of coke oven products	19.1
17	Manufacture of refined petroleum products	Manufacture of refined petroleum products	19.2
18	Manufacture of chemicals and chemical products	Manufacture of chemicals and chemical products	20

Introduction

No.	Industries	Classification of economic activities, 2008 edition	
		Designation	No.
19	Manufacture of basic pharmaceutical products	Manufacture of basic pharmaceutical products and pharmaceutical preparations	21
20	Manufacture of rubber and plastic products	Manufacture of rubber and plastic products	22
21	Manufacture of other non-mineral products	Manufacture of other non-mineral products	23
22	Manufacture of glass and glass products	Manufacture of glass and glass products	23.1
23	Manufacture of refractory products, cutting, finishing of stone	Manufacture of refractory products; manufacture of clay building materials; manufacture of other porcelain and ceramic products; manufacture of cement, lime and plaster; manufacture of articles of concrete, cement and plaster; cutting, shaping and finishing of stone; manufacture of abrasive products and non-metallic mineral products n. e. c.	23.2 – 23.9
24	Manufacture of basic metals	Manufacture of basic metals	24
25	Iron and steel	Manufacture of basic iron and steel and ferro-alloys; manufacture of tubes, pipes, hollow profiles and related fittings of steel; manufacture of other products of first processing of steel	24.1 – 24.3
26	Manufacture of basic precious and non-ferrous metals	Manufacture of basic precious and other non-ferrous metals	24.4
27	Casting of metals	Casting of metals	24.5
28	Manufacture of fabricated metal products, except machinery	Manufacture of fabricated metal products, except machinery and equipment	25
29	Manufacture of computer, electronic and optical products	Manufacture of computer, electronic and optical products	26
30	Manufacture of electrical equipment	Manufacture of electrical equipment	27

3 Abbreviations and symbols

Abbreviations – general

NH ₃	=	ammonia
CH ₄	=	methane
CO ₂	=	carbon dioxide
NO ₂	=	nitrogen dioxide
NO _x	=	nitric oxides (= nitrogen dioxide + nitrogen monoxide)
N ₂ O	=	nitrous oxide (= laughing gas)
NM VOC	=	volatile organic compounds (not including methane)
SO ₂	=	sulphur dioxide
SF ₆	=	sulphur hexafluoride
PFCs	=	perfluorocarbons
HFCs	=	hydrofluorocarbons
H ₂ O	=	water
NE	=	Non-ferrous metals
No.	=	number
Incl.	=	including
EB	=	Energy balance
EEA	=	Environmental-Economic Accounting
SNA	=	System of National Accounts

Abbreviations – units of measure

Equ.	=	equivalent		
EUR	=	Euro		
J	=	Joule	1 J	= 1 watt seconds (Ws)
kJ	=	kilojoules	1 kJ	= 10 ³ J
MJ	=	megajoules	1 MJ	= 10 ⁶ J
GJ	=	gigajoules	1 GJ	= 10 ⁹ J
TJ	=	terajoules	1 TJ	= 10 ¹² J

Introduction

PJ	=	petajoule	1 PJ	=	10^{15} J
Kg	=	kilogram			
t	=	tonnes			
mn	=	million			
bn	=	billion			
MWh	=	megawatt hour			
h	=	hour			
m ³	=	cubic metre			
%	=	per cent			
m ²	=	square metre			
km ²	=	square kilometre			
ha	=	hectare	1 ha	=	10 000 m ²
t-km	=	ton-kilometre			
p-km	=	passenger-kilometre			
o. b.	=	without bark			

Explanation of symbols

0	=	less than half of 1 in the last digit occupied, but more than zero
...	=	data will be available later
X	=	cell blocked for logical reasons
.	=	numerical value unknown or not to be disclosed
-	=	no figures or magnitude zero

Deviations in the totals may occur because of rounding off.

Note

Since the release of the tables in 2011 homogeneous branches (WZ 2008) are presented in a break down comparable to the statistical classification of economic activities of the European Community. Until 2010, the tables were calculated according to the WZ 1993 respectively on the basis of the WZ 2003.

The intensities are shown in the tables 2011 only for the years from 2000 onwards, as data on gross value added by homogeneous branches after the revision of the national accounts are available only as from the reference year 2000.

General notes

Raw materials

Raw materials are materials occurring in the environment in an unprocessed manner. Here all raw materials being extracted from the domestic environment to be used within the economy and all imported raw materials are presented. Unit used is tonnes (t). This information is supplemented by data about the imports and exports of semi-finished and finished products.

Sources are production and foreign trade statistics, the statistics on agriculture, forestry and fisheries, various association statistics as well as additional information from ministries, institutions and other authorities. If specific information is not originally available in tonnes, it is converted.

The table on raw material equivalents (RME) shows the volume of first input and the final use of raw materials within the economy. This is computed by tracing back all goods and services used for consumption, investment or export to those raw materials that were originally used to create them. The physical unit is tonnes of raw material equivalents (t RME). Domestic extraction of raw materials is by definition in raw material equivalents.

Use of water

A variety of data sources are used to calculate the tables of water withdrawal from nature. The initial data for water withdrawal are taken largely from official statistics (statistics of water supply and disposal of waste water in mining and facturing and with thermal power plants for public supply, as well as statistics of public water supply and waste water disposal), the last year under report of which was 2010. In order to close gaps in data (for instance in agriculture and services), further data from the official statistics are used as well as from other sources, such as publications of academic institutes, associations and organisations.

Waste water

In the tables on waste water, the volumes of waste are determined by water withdrawal from nature. Both values differ largely by virtue of the items infiltration and rain water, evaporation and other losses.

Different data sources are used to calculate the tables of waste water. The initial data are largely taken from official statistics (statistics of water supply and waste water disposal in mining and manufacturing and with thermal power plants for public supply, as well as statistics of public water supply and waste water disposal), the latest year under report of which was 2010. In order to close data gaps (such as which agriculture and services), many other data are used from official, as well as from other sources, such as publications for instance of academic institutes, associations and organisations.

Waste

Waste includes all residues or other undesirable substances. It may be either solid or liquid (unless it is introduced into bodies of water and waste disposal installations) and pasty materials (all kind of mud) and collected gases. The survey also includes waste to be recycled as well as waste for disposal. Information relating to waste volumes is always provided in tonnes. The evidence provided in the result tables is shown in 1,000 tonnes. The waste quantities are always wet-quantities of waste.

The basis for kinds of waste recorded from reporting year 2002 is the European Waste Catalogue (now List of Wastes) in accordance with the German Waste Catalogue Ordinance (Ordinance implementing the European Waste Catalogue of 10 December 2001 – Federal Law Gazette I, page 3379).

The European List of Wastes is a waste catalogue harmonised throughout the European Union which regularly checked based on new findings and amended as necessary. It is subdivided into waste chapters, waste groups and waste categories. The different waste types are entirely defined through their codes (6-digits) and the chapters to which they are belonging. For a precise detection,

especially of the waste treatment outputs, a further specification by 8-digit codes can be undertaken. The waste classification used is primarily oriented towards waste sources (branches).

Waste balance sheet

Section 6 of the German Environmental Statistics Act (*Umweltstatistikgesetz - UStatG*) stipulates that the Federal Statistical Office (Destatis) shall produce annual surveys in the form of balance sheets representing the amount, recycling and disposal of waste in accordance with Sections 3 to 5 of the Act. Detailed statistics from waste surveys are combined, using a computer model, to form the waste balance sheet.² The calculation has been carried out from reporting year 2006 in accordance with the so-called gross volume principle³. Based on the input of all registered waste disposal plants it summarises the waste volumes of any kind of waste generated domestically that is treated and disposed of. This is calculated from the input of the plants minus imports and plus exports. Waste flows subject to multiple treatments increase waste volumes to a certain extent. That is why re-treated waste that is already a product of one treatment is shown separately.

Further information on waste statistics can be found in the Internet under:

www.destatis.de

(navigation path: "Facts & Figures/Environment/Environmental surveys/Waste management").

1 Annually published in fachserie 19 "Umwelt", Reihe 1 "Abfallentsorgung" of the Federal Statistical Office (available in German only).

2 Calculation of the waste volume up to and including 2005 is based on the so-called net input principle, i. e. the domestic output of waste recycling and disposal is deducted from the total input of waste disposal plants. The objective was to avoid that waste counted twice in case of multiple treatments.

Glossary

Raw materials

Abiotic raw materials	Abiotic raw materials are non-renewable raw materials. In contrast to the biotic raw materials, replicating in sustainable farming, once consumed abiotic materials is with a view to the livelihoods of future generations irretrievably lost. The collection of abiotic raw materials is carried out separately for used abiotic raw materials such as fuels, ores and other mineral resources including peat and by not used abiotic raw materials (lignite overburden, tailings of energy and mineral resources and soil extraction).
Biotic raw materials	Biotic raw materials are renewable, naturally occurring substances of animal and vegetable origin. The biotic raw materials are recorded separately for used biotic raw materials such as crop products from agriculture, biomass for animal feed, biomass from forestry (wood) and animals (fishing and hunting route) and by non-usable biotic resources (not recycled biomass from agriculture (e. g. as straw, cover crops) and fisheries (bycatch). Bred animals are no raw materials in the context of these calculations and are therefore not included.
Exports (Special trade system)	Exports of goods and services - merchandise trade comprise goods leaving the statistical territory of a country. In the general trade system, the definition of the statistical territory of a country coincides with its economic territory. In the special trade system, the definition of the statistical territory comprises only a particular part of the economic territory, mainly that part which coincides with the free circulation area for goods. The free circulation area is a part of the economic territory of a country within which goods may be disposed of without Customs restrictions.
Imports	Imports of goods and services (merchandise trade) are goods which add to the stock of material resources of a country by entering its economic territory. It is accounted for direct importation of goods into free circulation of the destination country, all imports into stock (customs warehouse) at the time of its incorporation, as well as inward and outward processing arrangements as a customs official authorized activity or by customs officials appropriated admission temporaire including mending. The special trade, representable for imports only to the Federal Republic of Germany, however, contains no imports in stock. Imports from warehouse for free circulation or inward processing are, however, included in the special trade.
Primary materials	In the material flow accounts the term primary materials comprises the material extracted from domestic environment and all imports regardless of their stage of manufacturing (raw materials, semi- and finished goods).
Raw materials	In Environmental-Economic Accounts (EEA) raw materials are those materials occurring unprocessed by humans in the natural environment.
Raw material equivalents	The raw material equivalents of imports and exports consist of all those material inputs that are needed in the production of traded goods (intermediate material consumption), plus the mass of the imports and exports themselves. RME are equivalent to all those raw materials that from the basis of an import or export, irrespective of the economy in which the resources are used in the production process.
Raw material productivity	Raw material productivity expresses how much gross domestic product (in euros, adjusted for price changes) is obtained per tonne of abiotic primary material. The (non-renewable) raw materials withdrawn from the domestic environment – not counting agricultural and forestry products – as well as all imported abiotic materials (raw materials, semi-finished and finished products) are considered to be abiotic primary material.
Used extraction of raw materials	The used extraction of raw materials is a position of the discharge side of the material flow accounts. It covers all abiotic and biotic raw materials which are taken from the domestic environment and enter into the production or consumption process of the economy or into export. These include fuels, ores and other mineral resources, plant biomass from agriculture, biomass from forestry (wood) and biomass of animals (sea and coastal fishing and hunting bag).

Unused domestic extraction	Unused Domestic Extraction includes all those materials that are extracted from the national environment but not used in the national economy , i.e.they remain in the environment. Examples are: unused material excavated during civil engineering work and construction, unused material extracted in mining, unused tree residues from felling or unused parts of harvested crops.
Use of water / Waste water	
Cooling water	Cooling water or cooling waste water is water which is used to absorb or remove heat from cooling processes. It is generally unpolluted.
Groundwater	Groundwater is water that can usually recovered from an underground formation.
Infiltration	Infiltration water is especially unwanted drainage into the sewage network.
Spring water	Spring water is natural groundwater discharge.
Surface water	Water which flows on the surface of a land mass, such as rivers, streams, lakes etc., as well as artificial watercourses such as water reservoirs.
Treated waste water	Waste water discharged from treatment plant. Treatment plants are urban waste water treatment plants or industrial waste water treatment plants.
Waste water	Waste water is used water, typically discarded into the sewage system. It contains matter and bacteria in solution or suspension.
Waste water directly discharged	Direct discharge of treated and untreated wastewater or unused water into surface water or into ground water.
Waste water indirectly discharged	Indirectly discharged wastewater is discharge of treated and untreated (including unused water) water into the public sewage system.
Water discharged into nature	Water discharged into nature includes direct and indirect water discharge of industries and private households as well as water losses, evaporation and rain and infiltration water.
Water use	The use of water by industry and private households in a region arises from the water abstraction from nature, plus the water received from the public water sectors or other industries and the deliveries of unused water to other units. In addition to the actual used water for production and consumption water use – according to the concept of Environmental-Economic Accounting – includes infiltration and rain water, water losses and evaporation as well as the unused water. At the macroeconomic level, the difference between water use and the abstraction of water from nature is the balance of imports and exports of water.
Withdrawal of water from nature	Withdrawal of water from nature is the direct abstraction of ground water, surface water or spring water and bank filtrate.
Waste	
Construction and demolition waste	More than 40 % of Construction and demolition wastes are dumped into former and meanwhile inactive mining tunnels and about 30 % is reused for construction purposes.
Municipal waste	Municipal wastes are wastes from households and similar wastes from commercial and industrial sources. Also separately collected fractions and packaging do belong to municipal waste. Municipal waste are further differentiated into "household waste" (food waste, bulky waste, etc.) and "other municipal wastes" (market waste, street sweepings, etc.).
Other wastes	All remaining wastes which don not belong to one of the categories "municipal waste", "construction and demolition waste", "rubble-waste" and waste from waste treatment and summarized under the position "Other waste".

Waste from mining and treatment of mineral resources This waste category contains waste types, which are generated during detection, exploitation, extraction and physical and/or chemical treatment of resources. Before all enterprises and productions units belonging to the sectors mining and waste disposal have to report on this topic.

Waste from waste treatment installations Wastes generated during waste treatment and dedicated for additional waste treatment are named secondary wastes. They are belonging to the waste chapter 19. These secondary wastes are registered as input into waste treatment facilities and do belong to the waste balance. Waste amounts from waste treatment facilities which are neither subject to further treatment nor to disposal are assumed to go for recycling.

Table 5.1: Domestic extraction of raw materials (used) *)
1,000 tonnes

No.	Extraction	2000	2005	2010	2011	2012	2013

*) Results partly preliminary.

1) Partially revised in comparison to the previous editions of this publication.

2) These include meadows, mowed pastures, alpine pastures, rough pasture. Mowing and grazing alternate at regular intervals with mowed pasture. Rough pasture are areas only occasionally used for grazing.

3) Methodological differences compared to the results for forest accounting.

4) Including landings abroad.

5) Excl. aquaculture.

*) From 2001, imports and exports are collected acc. to SITC. A comparison of the figures with earlier results is hence only partially possible because of a change of concept.

1) Including products from fish catch and from hunting and living working animals.

Table 5.4: Supply and use of raw material equivalents (RME) by raw material categories 2010

1) Raw Material Input.

2) Raw Material Consumption.

3) Raw Material Equivalents.

4) Consumption of private households, NPISHs and government.

5) Ores incl. Gangue but without as accompanying sands.

6) Incl. For non-energy use.

7) Incl. peat.

8) Excl. Excavated soil..

9) Phosphates, potash and kieserite.

10) Incl. Sulfur and other mineral raw materials n.o.s.

11) Excl. Mineral sands used for metal production (see ores).

12) Incl. Dolostone.

13) Incl. anhydride and chalk.

14) Excl. Silica sand and other special sands.

15) Incl. bentonite and kaolin.

16) Wild fish catch and other aquatic (incl. Mussels from aquaculture).

48	hazardous waste.....
49	non-hazardous waste.....

*) Until 2005 calculation based on net principle. Since 2006 calculation according to the gross principle; please see explanation concerning the waste balance.

1) Changeover to more recent catalogue of waste types (LAGA until 1998, EWC from 1999, European List of Wastes from 2002).

2) Until 2003 the following allocations of fractions only for non-hazardous waste.

3) Until 2001 including biodegradable garden and park waste. From 2002, non-biodegradable garden and park waste have been allocated to order municipal waste while biodegradable garden and park waste have been classified under domestic waste.

4) Without waste of waste water treatment plants (ELW 1908) and secondary waste used as raw materials / products that leave the process of waste management. Since 2009 additionally without wastes from the preparation of water intended for human consumption or water for industrial use (ELW 1909), wastes from soil and groundwater remediation (ELW 1913).

Table 8.1: Amount of waste^{*)}

1,000 tonnes
